The BellaTek® Encode® Impression System

Optimization By Design®
Optimization Is Key
To Aesthetics

The BellaTek® Encode® Impression System provides optimized solutions to clinicians by eliminating the need for implant level impressions, which streamlines the treatment process for the surgeon, restorative clinician and laboratory. In addition, patients have a better experience and a beautiful aesthetic outcome.

“An appreciation of the protective effect of the soft tissue barrier is important for providing optimal aesthetic outcomes. Recent studies show that multiple abutment removals (disconnections/reconnections) are associated with increased crestal bone loss. These findings suggest using the fewest number of abutment removals to achieve better aesthetic and functional results.¹ ² Ultimately, the goal is to use “one abutment, one time” and the BellaTek Encode Impression System provides an important step for achieving this objective.”

–Xavier Vela Nebot, M.D., D.D.S., Spain

Optimization Is Key
To BellaTek
Digital Dentistry Solutions

Hard- And Soft-Tissue
Maintenance

• No need to remove the healing abutment,¹ preserving tissue and resulting in aesthetic outcomes

Customized Treatment
Solutions

• Choose a simple impression method above the gingiva to create aesthetic BellaTek Patient Specific Abutments in titanium and gold-colored titanium nitride

Practice Growth Through
Better Patient Care

• End-to-end treatment solutions for everyone involved allow for a more efficient workflow, less inventory to stock and provide a vehicle for practice growth

³ Procedure may vary based on patient and clinical variables. Not all cases can be performed without implant level impressions.

Patient Aesthetics Through Hard- and Soft-Tissue Preservation

How To Maintain Tissue Health

The oral mucosa (soft tissue) is unique anatomical and physiological tissue. A healthy intact mucosa is essential for teeth and oral health. Dental implants require an intact peri-implant mucosa for successful integration and maintenance. Adherent peri-abutment mucosa is credited with reducing and limiting both microbial and oral cavity content through the sulcus to the implant microgap region.

Clinical Relevance

Studies show that multiple abutment removals (dis/reconnects) negatively affect peri-abutment mucosal sulcus tissues and contributes to the loss of alveolar crestal bone (hard tissue). Crestal bone resorption leads to soft-tissue recession and reduced aesthetics.

Reduced Abutment Swaps

Unique codes on the occlusal surface of the BellaTek® Encode® Healing Abutment provide abutment design and milling information, eliminating the need for an impression coping. This reduces the need for multiple abutment removals, preserving the peri-abutment mucosal sulcus interface and maintaining the sealing function.

Aesthetic Outcome For The Patient

One supragingival impression of the BellaTek Encode Healing Abutment results in a BellaTek Patient Specific Abutment ready for cementation and delivery of the definitive prosthesis.

6 Hartman G. Initial implant position determines the magnitude of crestal bone remodeling. JOP 2004 Apr; Vol 75, No. 4.

The patented BellaTek Encode® Impression System is the gateway to creating a customized solution for you and your patients. When you eliminate the need for impression copings and conventional impression materials, the process is streamlined for you and the patient experience is improved by making it easier and more comfortable. This technology is unique to and only available from BIOMET 3i.

Benefits For The Patient

Comfort

• There is no need to use impression copings, resulting in a less invasive impression procedure for more comfort.

Fewer Visits

• The intraoral scan can be taken by the specialist at the surgical release visit, eliminating a restorative appointment and resulting in less visits to the dentist’s office.

Aesthetic Outcomes

• Abutments designed specifically for the patient for better aesthetic outcomes.

The Result: A Highly Aesthetic BellaTek Definitive Abutment

1 Take a digital impression of the BellaTek Encode Healing Abutment**.

2 Make a traditional impression of the BellaTek Encode Healing Abutment.

Gold-Colored Nitride-Coated

Simplified Impressions With The BellaTek® Encode® Healing Abutment!

1 Covered by one or more of U.S. Pat.6,558,162; 6,790,040; 7,425,131; 7,661,956; 7,988,449

** Compatible with the following systems: 3M™ Lava™ C.O.S., 3M™ True Definition, Align iTero™, Sirona CEREC Bluecam and Sirona CEREC Omnicam.
Practice Growth Through Better Patient Care

End-to-End Treatment Solutions That Optimize The Workflow For The Entire Team

Surgeon

- Efficient, streamlined interoffice processes simplify treatment for the referring dentist.
- Cutting edge technologies create an improved and more simple treatment process, differentiating the practice to referring dentists and more importantly, to patients.
- The BellaTek® Encode® Impression System makes it easier for your referral base and may increase treatment acceptance.

Laboratory

- Potential new customers may lead to increased crown and bridge business.
- There is no need to create a cast, which results in fewer steps in the treatment process, reducing overhead.
- This unique branding opportunity may grow the volume of your business.

Restorative Clinician

- No implant-level impressions are required - resulting in a simpler and quicker process; minimizing chairtime.
- There are no parts to order, eliminating the need to stock components.
- There is increased patient satisfaction due to an easier and more comfortable impression procedure.
- You have the ability to restore the case in fewer office visits.
